Medical Management Plan Our Lady of the Way

This Medical Management Plan (and a Student Health Support Plan) should be developed and must be in place prior to a child commencing attendance at the school, noting that in some cases, with Principal approval there may be an interim Medical Management Plan and Student Health Support Plan if the school is awaiting relevant medical or other information at the time the child commences attendance, and it would not be reasonable to delay a child's attendance in the circumstances. The Medical Management Plan and Student Health Support Plan must be kept together with relevant health records for the child.

The Medical Management Plan must be authorized by the treating medical / health practitioner, reviewed and updated as required including at times when the school requires further advice. A Medical Management Plan must be completed for each student with an identified health care need (not including those with Anaphylaxis as this must be documented in an Individual Anaphylaxis Management Plan).

The child's registered medical / health practitioner must be consulted by parents/guardians in the development of the Medical Management Plan. The advice from the medical / health practitioner must be documented in the Medical Management Plan (signed and dated by the AHPRA registered practitioner).

Where the medical management pertains to a specific condition e.g. epilepsy, a specialist advice service medical management template may be used e.g. Asthma Plan, Diabetes Australia (Victoria), Epilepsy Foundation of Victoria, continence care plan.

All medical management plans should (as relevant to the circumstances) detail the following:

- details of the diagnosed health care need, allergy or relevant medical condition including the severity of the condition and general care requirements
- any current medication prescribed for the child
- the response required from the school in relation to the emergence of symptoms
- any medication required to be administered at school or in response to an acute episode or an emergency
- the response required if the child does not respond to initial treatment
- access to community health services or when to call an ambulance for assistance.
